

To Whom It May Concern:

I would like to make a comment about 03-104 BPL or Broadband Power Lines.

I am against this proposal. The interference created by this system will hamper amateur and professional radio transmissions in the high frequency and very high frequency range. I do not believe the power companies will be able to control spurious emissions this system will put out. They have enough trouble keeping emissions down on power lines without BPL.

In this time of uncertainly when disaster seems right around the corner why hobble the service that can provide communications when all else fails? This service comes with little to no costs to communities and the country. The Amateur Radio Service stands ready to serve but we will be unless if we can't hear a bloody thing.

I sincerely hope you will reconsider this proposal and turn it down.

Thank you,  
Scott J. Royle
